

About Sumiglass®

Sumiglass is a laminated glass product intended for interior use only. Arch Deco Glass® strongly discourages use in exterior applications. Sumiglass can be found throughout the world, where it is used in interior applications such as doors and windows, side lights, room partitions, office dividers, glass handrails, and almost any other interior application that glass can be used.

Sumiglass panels offer virtually unlimited design flexibility. They are available in a choice of 77 standard options, including 15 Printed Patterns, the Frost and Rice Paper series, the Fiber Tone and Loom series, Woods, Decorated Aluminum, Marbleized Patterns and much more.

In addition, Arch Deco Glass® welcomes inquiries regarding custom fabrication using customer-supplied materials, fabrics, other materials and even custom designs.

Sumiglass® Laminated Glass...

Each piece of Sumiglass is individually fabricated to customer specifications in Arch Deco Glass manufacturing facilities in Columbus, OH and Salt Lake City, UT. Using specialized equipment and a unique laminating process proprietary to Arch Deco Glass, the decorative interlayer is placed between layers of adhesive and layers of glass. It is then permanently bonded to create a single pane which captures the specific pattern, color and texture of the decorative interlayer. Clear, tinted or coated annealed glass can be used. Heat strengthened or tempered Sumiglass glass is also available.

Sumiglass can be fabricated in circles, triangles, trapezoids, or in unique, client-supplied patterns. Laminated glass with a swiped (seamed) edge is standard. All other architectural edge fabrication profiles are also available.

Superior quality in every job is ensured by the fact that Arch Deco Glass® is a full-service glass fabricator with complete control of almost all aspects of the fabrication process.
